

## Stagnating Export

### What is the issue?

\n\n

The trade numbers for 2016-17 is showing a declining trend when compared to 2015-16.

\n\n

### What does statistics say?

\n\n

\n

- Trade volume in 2011-12 was \$305 billion.

\n

- It stayed above the 300-mark for the next three years before dropping off sharply in 2015-16.

\n

- In 2016-17 it is \$270 billion

\n

- The world exports showed similar trends due to slow growth all over the world.

\n

- Global merchandise exports in 2016 were \$16.5 trillion which was down by about 10 per cent from \$18.2 trillion in 2011.

\n

- India's share of global exports has remained more or less unchanged since 2011, at about 1.7%.

\n

- Prior to this there has been a steady increase in merchandise exports, from 0.8% in 2004.

\n

\n\n

### How far do the global factors affect?

\n\n

\n

- Part of the fall is due to the drop in oil prices since 2014, because of which the export of petroleum products has shrunk in value.  
\n
- Other reason is the growing energy self-sufficiency of the US, which has sharply reduced its energy imports.  
\n
- The other is the enormous success that China has had in import substitution.  
\n
- It supplanted imports from East Asian countries with domestic inputs into the manufacturing supply chain.  
\n

\n\n

### **What are the domestic factors?**

\n\n

- \n
- India-China trade is one of the most unbalanced anywhere, with an export-import ratio of about 1:5.  
\n
- India also runs a trade deficit with about 2/3<sup>rd</sup> of its important trading partners.  
\n
- They signify that the problem lies at home and not abroad.  
\n
- India's exports are concentrated in very few products and very few markets.  
\n
- This makes the country vulnerable to negative swings in world trade.  
\n

\n\n

### **What is the real reason?**

\n\n

- \n
- In spite of this India's improved on the Economic Complexity Index, to 45<sup>th</sup> in 2014 lace from 61<sup>st</sup> in 1995, in a list of 124 countries.  
\n
- This reiterates the fact that the real problem is not in world trade stagnation, or Chinese mercantilism, or a narrow export base though all of them are contributory factors.

- \n
- The real problem is the failure to develop an efficient manufacturing base.
- \n
- India has a surplus in services trade, agricultural goods trade (being the sixth largest exporter).
- \n
- It also has a surplus in transfer payments/remittances.
- \n
- But lags heavily in manufacturing sector whose share of the total trade in goods and services combined has been declining steadily.
- \n
- This has to be substantially improved to increase India's exports.
- \n
