

Stagnation in housing sector

Why in news?

\n\n

A recent study reveals real estate market of metro cities have fallen to a seven year low.

\n\n

What is the status of Indian real estate markets?

\n\n

\n

- According to a white paper 'Indian Housing Industry' by research and consultancy firm RNCOS, the housing shortage is expected to rise to 34.8 million units by 2022.

\n

- India's real estate sector is in the stagnations and there is a huge pile-up of unsold inventory.

\n

- 'Quoted rates' are just that for conversation purposes while real rates have already fallen by a fifth, with buyers still not showing up.

\n

- New project launches in urban India or at least in the major markets of the National Capital Region, Mumbai, Pune, Ahmedabad, Bengaluru, Chennai, Kolkata and Hyderabad have fallen to a seven-year low.

\n

- Only one lakh units being started this year compared to the average of over five lakh units between 2010 and 2013.

\n

\n\n

What are the reasons for this stagnation?

\n\n

\n

- The outer stretches of almost every major Indian city are littered with the skeletons of completed and partially completed projects.

\n

- The introduction of the Real Estate (Regulation and Development) Act, 2016 (RERDA) albeit by just a handful of States so far promises to make the situation worse.
\n
- Most of the under-construction projects in RERDA States are stuck because the developers cannot meet the new, stricter provisions of the Act, and cannot sell them without RERDA approval.
\n
- The problem is also with definition of affordable price by private sectors, the price is lower doesn't mean those needing houses buy them.
\n
- Most of the so called affordable houses are unliveable from a practical point of view too far away from economic or employment hubs, poorly connected, and lacking social and soft infrastructure like education and entertainment.
\n
- So the private sector's solution isn't really working.
\n

\n\n

What is the performance of state housing boards?

\n\n

- \n
- Most of the State Housing Boards have built very little.
\n
- The Gujarat Housing Board has built around 1.76 lakh units so far in over half a century.
\n
- The Odisha State Housing Board, set up in 1968, has built around 28,500 houses.
\n
- The Madhya Pradesh Housing Board manages around 6,000 houses a year.
\n
- These housing boards have also gone the way of the private sector, jacking up prices.
\n
- So much so that earlier this year, the Delhi Development Authority, which has a monopoly in Delhi, attracted only around 8,000 applications for 11,000 flats in the economically weaker section category, because of its high prices and shoddy construction in past projects.
\n
- Despite all the noise the government makes about housing to all, it does not get either policy bandwidth or adequate funding.
\n
