

## **Timely Wages to MNREGA Workers**

### **Why in news?**

\n\n

There is an ongoing PIL in the Supreme Court between Swaraj Abhiyan versus Union of India.

\n\n

### **What is the PIL about?**

\n\n

\n

- The PIL is about the lack of functioning of social security systems like the National Food Security Act (NFSA) and the National Rural Employment Act (NREGA).

\n

- The NREGA mandates that every worker must receive her wages within 15 days of completion of a workweek.

\n

- If this condition is not met, a delay compensation is to be paid at a rate of 0.05% per day of delay.

\n

- In spite of this merely 21% of the sampled transactions were paid within the stipulated 15-day period.

\n

\n\n

### **How is the payment made?**

\n\n

\n

- Under the National Electronic Fund Management system (Ne-FMS), upon completion of a work week, a Funds Transfer Order (FTO) is generated at the block/ panchayat.

\n

- Then the Centre approves the FTO digitally.

\n

- Then the money is transferred directly to the individual workers' account.

- \n
- The time taken till FTO generation is the state's responsibility and the time taken thereafter is the Centre's responsibility.

\n

\n\n

## What constitute the delays?

\n\n

- \n
- **Definition of Delay** - The current definition of the delay calculates delay days only until the FTOs get generated at the block/ panchayat.
- \n
- The times taken by the Centre to process the FTOs and release wages are not getting accounted as delays.
- \n
- **Payment Infrastructure** - In an attempt to improve the payments process, the government migrated to the Ne-FMS in April 2016.
- \n
- Prior to the Ne-FMS system, the state governments would use a contingency/ revolving fund to make the payments until the Centre sanctioned the funds.
- \n
- The current payments system is completely centralised.
- \n
- The state governments cannot pay the workers even if they intend to.
- \n

\n\n

## What should be done?

\n\n

- \n
- Not only has the government violated the law but also the worker's rights to timely wages.
- \n
- The payments infrastructure requires seamless coordination between the Centre, states, payment agencies, and the administrative bodies.
- \n
- There should also be a clearly defined responsibilities for each one of them.
- \n
