

Wetlands Rules, 2017

Why in news?

\n\n

The Ministry of Environment, Forests and Climate Change has recently notified the Wetlands Rules, 2017.

\n\n

What are the notable provisions?

\n\n

\n

- **Definition** - Wetlands are defined as an area of marsh, fen, peatland or water.

\n

- It could be natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt.

\n

- It includes areas of marine water the depth of which at low tide does not exceed six metres.

\n

- The rules apply to:

\n

\n\n

\n

- i. wetlands categorised as “wetlands of international importance” under the Ramsar Convention.

\n

- ii. wetlands as notified by the central and state governments and UT administration.

\n

\n\n

\n

- **Management** - The new Rules farm out wetland management to states and union territories.

\n

- The State or UT Wetlands Authority will have to prepare a list of all wetlands and a list of wetlands to be notified, within specified time.
\n
- However, it is up to the states to decide which wetlands are to be notified.
\n
- A comprehensive digital inventory of all wetlands is to be prepared within a year.
\n
- **CWRA** - The new rules have done away with the earlier Central Wetlands Regulatory Authority (CWRA) entirely.
\n
- CWRA has been replaced by the National Wetland Committee, which has a merely advisory role. These include -
\n

\n\n

- i. advising the central government on proposals received from states/UTs for “omission of the prohibited activities”.
\n
- ii. prescribing norms and guidelines for integrated management of wetlands based on wise-use principle.
\n
- iii. recommending trans-boundary wetlands for notification.
\n
- iv. reviewing the progress of integrated management of Ramsar Convention sites.
\n

\n\n

- **Restrictions** - As per the new rules, encroachments on wetlands have been banned.
\n
- It also prohibits solid waste dumping, discharge of untreated waste and effluents from industries and human settlements.
\n
- It says that conservation and management would be based on the principle of ‘wise use’, which is to be determined by the Wetlands Authority.
\n

\n\n

What are the shortfalls?

\n\n

\n

- **Definition** - The 2010 Rules included in the definition of wetlands all inland waters such as lakes, reservoir, tanks, backwaters, lagoon, creeks, estuaries, etc.

\n

- It also included man-made wetland and the zone of direct influence on wetlands.

\n

- However, the 2017 Rules are not as comprehensive as this.

\n

- It does not include river channels, paddy fields, human-made water bodies/tanks specifically for drinking water purposes, aquaculture, salt production, recreation and irrigation purposes.

\n

- It also do not include wetlands under forest and coastal regulation zones..

\n

- **Management** - There were lethargic response from states and UTs, in the past, on wetlands protection.

\n

- So devolving management to states and UTs could be ineffective

\n

- **Restrictions** - The term 'wise use' is subjective and could dilute the earlier restrictions.

\n

- There is also no timeline specified for phasing out solid waste and untreated waste from being dumped into wetlands.

\n

- The restrictions on "any other activity likely to have an adverse impact on the ecosystem of the wetland", are not specified clearly in the Rules.

\n

- **Appeal** - The older provision of appealing to the National Green Tribunal does not exist in the 2017 Rules.

\n
