

WHO's Report on Swachh Bharat Mission

Why in news?

\n\n

A recent report by the World Health Organization (WHO) has praised India's Swachh Bharat Mission.

\n\n

What are the highlights?

\n\n

\n

- The WHO statement was based on the initial results of a WHO modelling study on the health impact of the Swachh Bharat Mission Gramin (SBM-G).

\n

- WHO lauds India's commitment to accelerated coverage of safe sanitation services.

\n

- It said India could avert 3 lakh deaths provided there is 100% implementation of Swachh Bharat Mission.

\n

- This is in reference to deaths due to diarrhoeal disease and protein-energy malnutrition (PEM).

\n

- The WHO analysed India's accelerated coverage of safe sanitation services by accumulative Disability Adjusted Life Years (DALYs).

\n

- DALYs is the sum of the years of life lost due to premature mortality and years lost due to disability or ill-health.

\n

- According to the calculations, if all sanitation services are used, the initiative could result in over 14 million more years of healthy life in the period measured.

\n

- However, most of the WHO statement talks about the benefits of the sanitation programme in the future tense.

\n

\n\n

What is the actual status of Swachh Bharat mission?

\n\n

- \n
 - According to official sources the household latrine coverage figure for 2018-19 stands at around 90% across the country.
- \n
 - In Odisha it is nearly 60%, in Bihar 63%, in Goa 76%, in Tripura 77%, and in Jharkhand 85%.
- \n
 - On the other hand, states like Andhra Pradesh, Chhattisgarh and Arunachal Pradesh have 100% coverage.
- \n
 - Household sanitation coverage has increased from an estimated 2% per year before Swachh Bharat to more than 13% annually between 2016 and 2018.

\n

\n\n

What are the positive health impacts?

\n\n

- \n
 - Swachh Bharat Mission led to additional health gains through changes -

\n

\n\n

- \n
 - i. in personal hygiene (e.g., handwashing behaviour)
 - ii. in consumption of safe drinking water (e.g., reduced risk of faecal contamination of drinking water)

\n

\n\n

- \n
 - There is evidence that improvements in drinking water supply, sanitation services and personal hygiene have positive health impacts.

\n

- They include

\n

\n\n

\n

- i. improved nutritional status and its benefits
\n
- ii. reduced incidence of infectious diseases such as different neglected tropical diseases and acute respiratory infections
\n
- iii. reductions in diarrhoeal disease
