- a. It is a parasitic disease that affects Brain functions
- b. It is a zoonotic infection that causes inflammation of blood vessels
- c. It is a genetic disorder that affects skin
- d. It is a fungal infection that affects respiratory tract of children below 5

Answer : c

Harlequin ichthyosis

- The disease is an extremely rare genetic disorder that resulted in thickened skin forming over nearly the entire body at birth.
- The disease affected one in three million births and is caused due to a mutated gene inherited from the parents.
- The disease sees the skin form large diamond-shaped plates across the body that are separated by deep cracks (fissures).
- The skin is dry and scaly, almost like fish skin, Mutations in the ABCA 12 gene are stated to cause harlequin ichthyosis.
- The ABCA12 protein plays a major role in transporting fats in cells which make up the outermost layer of skin.
- Severe mutations in the gene lead to the absence or partial production of the ABCA12 protein.
- This results in lack of lipid transport and as a result, the skin development is affected by varying degrees according to the severity of the mutation.
- Recently Odisha reported it's first-ever case of a baby born with harlequin ichthyosis.

10) *Mars Oxygen In-Situ Resource Utilization Experiment (MOXIE)* is a part of which of the following space mission?

- a. NASA's Perseverance Mission
- b. Emirates Mars Mission
- c. CNSA's Tianwen-1 Mission
- d. CNSA's Tianwen-1 Mission

Answer : a

Mars Oxygen In-Situ Resource Utilization Experiment (MOXIE)

- NASA's Perseverance mission was able to produce oxygen from the thin Martian atmosphere for the first time.
- In its first operation since arriving on the Red Planet, the Mars Oxygen In-Situ Resource Utilization Experiment (MOXIE) produced 5 grams of oxygen from carbon dioxide in the Martian atmosphere, enough for an astronaut to breathe for 10 minutes.
- On Mars, carbon dioxide makes up ~96% of the gas in the planet's atmosphere.
- Oxygen is only 0.13%, compared to 21% in Earth's atmosphere, like a tree on Earth, MOXIE inhales carbon dioxide and exhales oxygen.
- It does so by using heat at a temperature of around 800 degrees Celsius, and in the process also produces carbon monoxide as a waste product, which it releases in the Martian atmosphere.
- MOXIE is designed to generate up to 10 grams of oxygen per hour, and is placed inside the Perseverance rover.
- It is the size of a car battery, weighing 37.7 pounds (17.1 kg) on Earth, but just 14.14 pounds (6.41 kg) on Mars.

- MOXIE is only a test model, Future oxygen generators that descend from its technology need to be about 100 times larger to support human missions on Mars.
- A substantial amount of oxygen supply on Mars is essential for crewed missions that plan to go there, not just for astronauts to breathe but for rockets to use as fuel while coming back to Earth.
