A team formation shift as required in G20 grouping from commitments on aid and trade to collaboration around  
S&T. Explain.

India is in the Troika with Italy and Indonesia in G-20 and it is set to take up the presidency next year. There are numerous challenges and opportunities before us.

### Challenges to G-20

The UN and WTO ~~are~~ losing centrality due to not securing co-operation between donor and recipient countries. The G7, China-Russia, India and others can set the global agenda.

From the Russia Ukraine war, global chaos dominated by US-China, expanding influence of trade ~~cause~~ impediments.

### India's action

G-20 comprises 65% of population, 75% of world trade and 85% of global GDP.

India must focus of science and technology collaborations as it is the driver for diversification.

Green energy efforts can be channelized for the development of green hydrogen, solarisation of grids. The International solar Alliance and Decarbonising Transport in Emerging Economies initiatives must be expanded.

Digital technologies Digital access as universal service and open access software for cost effective service delivery options.

Space The sharing of geospatial and earth observations data between countries can help in agriculture planning, disaster management etc.

The G-20 meets must be modelled on the lines of BRICS so that no one country emerges as super power ~~without~~ a conceptual model is laid.
