

increasing its quality. Further research and development should be done and sustainable introduction of these methods should be carried out.

Zero tilling Agriculture - where farming is possible without chemicals, fertilizers, and artificial tilling

Pusa decomposers - where decomposition carried out through Fungus also enrich soil which is cost efficient

Disincentivising unrestricted use of chemical fertilizers

Encouraging usage of neem coated urea and other natural soil enriching solutions, and composts.

Agricultural policy makers should make policies which is encouraging farmers to concentrate on Nutrition enrichments and consumer friendlier which will automatically increase market demand and stimulate farmer's economic growth

Along with above food fortification and organic farming policy makers should concentrate on food diversification.

Government should encourage multicropping and multi farming.

The foresaid natural farming will majorly help and encourage farmers towards multi cropping.
