

Q: Agro-ecology is not just a set of agricultural practices, it focuses on changing social relations and empowering farmers.

Agro-ecology as a word can be considered in two aspects (i) Agro-forestry (ii) community conservation.

Agro-forestry: Recent issues on deforestation has always sparked momentum among governments, and also tribals being deprived of agricultural land and practices has always been an issue. Since the time of britishers. Agro-forestry is one such program which upholds both.

afforestation practices and Agro-community reservation setup for tribal community people. Agriculture practised along forest reserves and areas by tribals and farmers has also got social responsibility of holding the forest rights and minor produce rights and has also developed their community towards agricultural sustainability, empowerment & produce.

Community conservation: Community conservation of Agriculture is Agricultural Areas and land conserved by communities in rural and

also in Urban Areas. Especially, illiterate.
which is an issue with farmers was widely addressed
in community conservation & co-operatives development.

Further various programmes like zero budget.

Natural Farming & Perma-culture. which not only
gave a proto-type for farmers to come out of
debt traps but also gave them a new light on.

Sustainable Agricultural practices.

In Economical perspectives:

These practices also helps
in empowering farmers and also helps in,
controlling food inflation which is a major goal for
account of ^{low} headline inflation. By keeping production,
transportation and procurement costs at a low rate.
thus reducing price spread within the commodities.

Thus Agro-ecology is not just confined with
Agricultural development but also focuses on,
economically perspective of farmers as well as,
country and also helps them in societal improvement
towards them.
