

Do you think that country has reached the stage where it can make major contributions to global growth. Examined.

India ranks 5th in global GDP

and accommodates one-seventh of the global population. India has reached where it can make global contributions.

Global Value Chains

As per World Economic Forum report India has high potentials in demand, government support and demography.

The domestic demand is projected to rise from \$1.5 trillion to \$6 trillion by 2030. The boost in consumption can

increase the market access of global companies.

The government is also boosting investments and infrastructure via Bharatmala, National Infrastructure Pipeline, Ghat Shakti, etc

Science and Tech

India participates in ITER project that is streamlined that can be horizontally deployed domestically and also to like minded countries.

The Global Radio Navigation System has approved India's Navic are amongst them.

Climate
India made appreciable targets at the COP26, UNFCCC with the Panchajanya guidelines

Way forward

For achieving global growth, interest rates, inflation rates, cost of doing business etc have to be prudent. The role of centre-state co-operation is paramount.
