

Role in improving Human welfare:

- By adopting the process of forest landscape restoration the world will be benefitting of fresh air which is largely done through carbon sink of 2.5 billion to 3 billion tonnes.
- It will effect the health conditions of human being the mortality rate may be reduced.
- Agro-forestry lessens rural-to-urban migration and contributes to an increase in resources and house hold income.
- The mutual relation between the forest and the people will be increased by observing different festivals in the name of forest like Vanamahatsav

Conclusion:

- India must adopt the plan pro-actively and enact in all states of having forests in lesser range.
- Saving our people is saving our planet
- Vulnerable forest dependants should be factored in the context of socio-economic development.
