Social messaging applications are blamed to be the principal offender in recent lyching cases in India. Evaluate.

In recent years Lyching Cases are increasing with the Spread of false Information through Social Media. And Currently whats app is blamed for Spread of Misinformation/Fake Information. But from the whats app point of View it has to protect the users Confidentiality and their privacy. Hence they are using an end-to-end encryption. If the whats app is requested to Verify the contents of Message then it is beeing requested to the work of the government.

In this Connection the major drawback is that there is no anti-Lyching Law in the Country.

Need to Form a Law

1) To maintain rule of law

2) To protect the lives and the Inhest of Minority Community

3) To strengthen Secular Nature of state

4) To maintain Community Disciplene and Constitutional Ethics.

5) Such Incidents are thread to Democracy and Economic growth of our nation.

Social Messaging application is basically helping the people in a long distance communication and transfer of datas a fast. But the same is misused. Hence it is the responsblity of the public to fine responsblity and to stop the spread of wrong information. If an anti-lynching law is placed then it would reduce the rate of lynching in the country.
