

National Digital Health Mission adds the dimension of inclusiveness and can effectively transform India's healthcare system. Do you agree with this view? Explain

National Digital Health Mission (NDHM) was announced by Honourable PM Narendra Modi during 26th Jan 2021. On Republic Day.

A Dimer National Digital Health Mission!

⇒ Digital Structure:

→ Help to maintain the earlier health record

→ Help the doctor to gain complete data and history of medical to patient

⇒ Inter linking —

→ Any doctor across globe can gain the data medical data/history and treat properly

→ The data and other accounts will be linked with medical history for all users/connections

⇒ Privacy!

→ Data will shared with the per mission of patient or user

→ The data will be stored with the Govt.

* Dimension Inclusiveness / Involved!

* Infrastructure

- needed to store data use of users
- needed to provide data to all or doctors

* Technology & Privacy

- digital technology involved
- privacy is one of the concern
↳ need to provide privacy

* Start-ups!

- Various start-ups are offered to identify and develop the features and develop the software

* Doctors

- Doctors need to be trained for this project and efficient use it

* Effective transformation

⇒ will be effective if used properly and adequately

- Privacy to be maintained of users
- all doctors and users base must be able to use it and find it easy to use it
- the pro need to properly link the other verification details

and dates of use.

→ must be applicable to every person
from urban to rural areas

* Conclusions:

→ Digitized data can be used effectively
and efficiently with proper security
measures and data to kept private

→ Health is an important aspect for the
development and growth of country
So the data or medical history
to be maintained properly for
proper treatment
