### Daily Answer Writing

Q1. The policy priority with respect to population needs to focused on augmentation of the quality of life.  
Elaborate. (200 words) (10 Marks)

Q2. By 2047, India could become a knowledge economy powered by cutting-edge research. Do you agree with this view? Comment (200 words) (10 Marks)

Ans 1. India is the second-most populated country in the world whereas it is on sixth no. in respect to area.

The population rate of India is very high which leads to severe consequences :-

1. Reduces Per Head Availability of Resources  
Resources are limited in nature & some are non-renewable but the increased population reduces per head availability of resources to citizens.
2. High Density of Population  
India has a huge population and in consist area, the density of population increases which leads to various problems.
3. Increases Poverty & Bad Women Health  
With more members in a family with limited income, families are deprived of basic services of living such as Food, Clothing, Shelter,

Education & Health. Moreover, Women's health also deteriorates.

With so many adverse affects of high population, the Government as well as Citizens should together take steps to reduce population. Following measures can also be taken :-

1. Social - security benefits should be removed for families having more than 2 children.
2. Awareness should be spread through mass rallies and programmes to make people understand the importance of controlled population.
3. The education and healthcare of 4 children of families with less than 3 child should be funded by government.

At last, I want to say that The combined effort of citizens & government, is required to control the population.
