

South and Southeast Asia are not immune to the challenges of displacement. Issues with Refugee management. Refugees as assets.

Refugees are the persons who are displaced from their home country due to violations and fear of persecution.

Asia  
South & Southeast Asia

In the recent times, there are lot of issues happening in Asia, that led to displacement of large number of people.

①. Myanmar Coup - military takeover of government that led to displacement

of Rohingyas around India, Bangladesh.

②. Taliban takeover of Afghanistan

↓  
that led to mass exodus of people as refugees to India, Pakistan, Iran and some neighbouring countries.

with these conditions and political tensions, South & southeast asia are prone to Refugees.

### Issues with Refugee management:

①. (Socially) — They are difficult to identify and spread across vast regions.

India — around 200000 lakhs Refugees according to UNHCR Report and over half of them are women.

②. (Economically) — ~~The~~ More need of financial resources, loss of country's own revenue resources.

③. compete with local people for jobs lead to displacement of local people.

④. (Terrorism) — Some radical minded refugees preach terrorism which is much against sovereignty of our country.

⑤. There is also an issue of illegal voting.

## Refugees as assets ::

①. Some refugees need of opportunities and not handouts.

eg. An Afghan Refugee after completing his education - started teaching to lot of refugees and migrants.

↓

Thus, they want to be self-reliant and serve for community & society.

②. with proper skill & guidance from expert - they can also turn out to be an successful business people & entrepreneurs.

Considering the lack of effective refugee policy in India, there should be an effective co-ordination between people, NROs, and government in tackling refugee management.

India should also try to adopt the comprehensive refugee management policy.
