

Government of India must work on addressing various issues to fulfill the intentions behind sustainable development goals. Analyse.

In 2015 United Nation general assembly adopted 17 sustainable development goals with the intention to achieve human progress in aspects like end all form of poverty, fight inequalities & tackle climate change.

India playing significant role in achieving these goals. to assess the progress "NITI Aayog" released SDG India index 2020.

Index indicated India is right directed to achieve goals related to clean energy, urban development & health, because of govt flagship schemes like UJJWAL yojana to provide clean cooking fuel, Smart cities project, swachh Bharath Urban & PM Aayushman Bharath yojana to provide universal health insurance to nearly 10 crore households.

Also Eradication of poverty showed improvement because of govt employment generation schemes like MGNREGS, startup India, free food grains

However the Index revealed there is decline in areas like

* Industry Innovation & Infrastructure

* Decent work & Economic growth

The pandemic induced economic recession is one of the possible obstacle in achieving the goal

To address this govt should take steps enacting 4 Labour code bills is one good step, NITI Aayog ATAL INNOVATION Mission, Atal thinking labs also supporting innovation.

National Infrastructure pipeline to fund infrastructure projects and recent Emergency credit line guarantee scheme to ensure credit availability is also good step

India can set a example achieve SDG goals if above problems addressed in right direction
