

Recent COVID-19 pandemic has devastated effects on our health infrastructure and population depriving economic development and livelihoods.

### Tertiary care

Health ~~sect~~ is a state subject.  
But it requires both centralized & decentralized approach.

### Primary health care (Decentralized).

1. Creating robust PHC creating database on population and establishing such PHC at village panchayat level.
2. Anganwadi Centre for children nutrition and for pregnant & post pregnant health - needs infrastructure boost up - Pooshan Abhiyan.

3. Poshan Abhiyaan - Nutrition - for school children - Mid Meal scheme must orient towards nutrition based.

### Secondary Care:

1. Institutional delivery and lifestyle disease which are non-communicable in nature requires awareness and changes in lifestyle.

### Tertiary Care:

- life long disease, Cancer treatment, serious organ disorders are treated in tertiary which is also of lifestyle oriented but also genetic in nature.  
- Requires extensive infrastructure development.

### Technology

- Usage of Tele-medicine for non serious ailments and ~~ps~~ other psychological disorders should be promoted.

Human resources & budgeting are main important aspect. Health sector requires 2.5 - 3% of GDP spending. Increasing Doctors - Patient ratio to 1:1000 from 1:1456 is needed.
