

To become a dependable Manufacturer of high quality Medical devices & second global factory of the same, India needs to bring in quality culture: Explain

Introduction: India always likes in Medical tourism, because of the low cost & good services. But, we lag in the quality of the services and Medical devices.

Covid 19 impact: Though we have standard Organisations like Bureau of Indian Standard (BIS), Quality Council of India (QCI) to check our quality in education, Medical products and services, Consumer goods etc. Due to the need of the galaxy of PPE (personal protective - Equipment) lits, Masks and other products at present, led to Mitigation in Product quality.

Measures to Enhance Quality:

National Quality Advisory Council and a dedicated Principal Quality Advisor has to be appointed to evaluate the quality and safety standard of the Products.

For the success of Make in India and to be self reliant, we must inculcate quality in the Vertical, Horizontal, Common products family standards at affordable price to attract the consumers.

Quality of the Education, Labr (Not only for teaching, but also for research and development) will also help us to be unique globally.

Conclusion: Our government has come up with reduction (80-90%) in import as a way forward approach to enhance local quality standard, hoping for a better place in the World economy.
