

## 2) ENVIRONMENT:

Duration = 16 mins

In recent times India is facing the shortage of coal crisis. The main shortage of coal states are Kerala, Uttarakhand & Tamilnadu. India had shortage of coal crisis because the electricity that ~~which~~ <sup>is used</sup> more by ~~people~~ of large population. The usage of more coal to produce electricity which leads "Global warming" & "Climate change". So, the only way is to produce electricity by Renewable source mainly by using

solar energy of solar panels. This can reduce  
the melting of glaciers & climate change.  
Recently an agreement was signed between  
India & France called "Poivre agreement" which  
is of to produce 450 GW by renewable  
resources in 2030. But in India spending  
on more production of coal which similarly  
can increase electricity tariff also. ~~from~~  
~~that people may suffer its cost.~~ Due to  
the increase electricity tariff the ordinary  
people will severely suffer.
