- Along with generation of powers in MW, in rural areas KW range Energy production must be Encouraged.
- The companies must be enabled to supply Energy on a first come-first bases and also to the consumers directly. This should be in both urban and rural areas.
- The feed-in tarif that is money paid to the busines should be payable for consumers as most of India has villages, which would enable them for procurement of Solar energy.
- Thus, Creation of Such huge lakhs of Mega Watt of Solar energy through private investment in coming years must be feasible and could take India globally in Sloar power and move towards renewable Energy sources.
