

In the context of omicron threat, Real-time & Reliable morbidity & Surveillance is essential but better preparedness Elaborate.

India is willing to make a stand on "Bovarian before cure" model in the upcoming new variant & better than before prepared ~~as~~ for the omicron.

### African Blessing:

While the spread was being to be noticed from the African origin Africa has made a Resilient / Reliable morbidity Surveillance

→ It will help in immediate Response in Real time which will help us to Retaliate the variant

→ Pre information will provide edge for us to launch a pre-emptive strike on variant by strictly Adhering to the protocol eg: Social distance, Double Mask.

→ Procurement of ICU beds for the worst case scenario

The lessons from mistakes:

- i) Full stock & Maintenance of the Oxygen in Hospitals.
- ii) Stricter Surveillance on COVID Protocols.
- iii) Increased in Herd immunity due to the increase in ~~is.~~ in vaccinated population.

With rise pre-emptive measures & the real time information from Africa is ~~with~~ world of saving lives in strides.
