

In what ways India can reprioritise the healthcare services at various levels to handle the impacts of future pandemics. Explain (200 Words)

India need to learn from this high time to handle the impacts of future pandemic. India needs to strengthen its surveillance capabilities, primary, secondary, tertiary health care and vaccination priority and policies.

Though Government has scaled up the capacity of testing it has missed to focus in certain areas like strong containment, mitigation measures and concurrent genome sequencing. To overcome this government must ensure robust public health force at primary, secondary and tertiary level.

In Addition Government must create awareness and confidence among public about the existing medicines of AYUSH to handle the crisis in future. Further a strong integrated approach of doctors of Allopathy and AYUSH must be reprioritised to ensure the efficient outcome of doctor to patient ratio of 1:897.

Government to make India a Soft power amidst pandemic by balancing economy it should emerge as the vaccines' World's Biggest exporter. Government must try roping in different manufacturers for vaccine production through Make in India programme.

On the end of the day Government must ensure vaccinating all citizens besides export. Thus by Reprioritising the healthcare and vaccination strategy government can effectively handle future pandemics.
