

1. In the context of performance in Environmental Performance Index, India must hold of the fact that there are other factors critical to survival of Tiger. Explain (200w)

□ In performance of EPI, India hold at lowest rank among 180 with over all score of 19.9

□ Even though India is home to 80 % of tiger in the world

INTERNATIONAL TIGER DAY - 29th JUNE

India's initiated performance

⇒ India reporting tiger numbers increased 40% since 2005.

⇒ According to report All India Tiger Estimated Report 2018 shows almost three thousand tigers in India.

FACTOR CRITICAL FOR SURVIVAL

* Tigers are more dominated in landscape than Reserved areas.

* changes in genetic variants

* fragile habitat to live

Areas to get improve

- ⇒ even number of tigers increased it is still in endangered species.
- ⇒ It does not only good to see increase but breeding & reproduction is still less of loss of species.
- ⇒ by improving & protecting we need to focus more on genetic variant & location for wild tigers.

WAY FORWARD

- Special Attention to changes in genetic drift
- Improving tech. to find genetic drift
- Avoid poaching or killing tigers.
- Intro. New scheme to protect & increasing no. of tigers.

CONCLUSION

* It is one of duty to ensure the survival of tiger wild tigers & we must work together to save them.
